

THE DIGITAL HIPPOCRATIC OATH: DO NO HARM... TO ME AND MY DATA

The healthcare industry has adopted digital technologies to improve healthcare for New Zealanders. More and more devices, including those implanted into patients, are software enabled and connect to eHealth Records.

These technologies have the potential to save lives. However, alongside our dependence on digital technology is the growing business of cyber crime.

Join us for a **FREE** two-day cyber security boot camp that brings together global experts in digital health mobility and cloud security, hacktivism, medical device security awareness and governance. Our speakers include US-based Beau Woods from 'I Am The Cavalry'. The boot camp will be facilitated by Dana-Megan Rossi, the Director for Cyber Security Vulnerability and Threat Management at BD.

Beau Woods

Dana-Megan Rossi

I Am The Cavalry was launched at DefCon 21 (the world's largest hacker convention) and their goal is to get ethical hackers to work with health leaders and device manufacturers to better inform them about cyber security risks.

WHEN/WHERE:

16-17 October at healthAlliance, Connect Business Park, 581-585 Great South Road, Penrose, Auckland.

WHO SHOULD ATTEND:

CEOs, CIOs, CCIOs, CISOs, clinicians working in digital health, cyber security specialists, biomedical engineers, researchers, and anyone with interest in cyber security and medical devices in the health sector.

TOPICS:

- Cyber crime in healthcare: Managing risks and incident responses
- Do we need a Hippocratic Oath for medical devices and health data?
- Tracking cyber security risk and making risk-based decisions
- How to adopt security principles for digital medical systems and devices
- A look at international policy and procedure for medical device security
- Security transparency and the importance of communicating to patients and whānau
